

Custom High Power Density Motors For Extreme Environments

We have the engineering know-how to build your custom motor designed to your outline and performance requirements.

- Prototypes tested to verify mathematical model
- Designed to meet high and low temperature variations
- Corrosion resistant materials
- Radiation hardened
- Custom windings available
- Custom seals and greases for demanding applications
- Feedback: Resolver, Encoder, Hall Effects, or Sensorless
- Gear boxes to suit any desired speed and torque
- **Sizes range from 0.5 inch diameter up to 3 ft. diameter**

Custom Sizing For Your Application

Since 1946, we've been manufacturing **customized motors, generators, and ball screws** for harsh environments and designed to your performance requirements, weight, and size restrictions. Our expertise in engineering and operational excellence allows us to provide reliable products to our partners all over the world.
